The conjugate offers a number of advantages over the currently available APC products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 antitrypsin. The conjugates have an increased in vivo half-life, increased serum half-life, increased resistant to inhibitors, reductions and the conjugates have a resistant to inhibitors.

cc attachment group for the non-phypeptide group (e.g. an N-phycosylation cosite). Also included are (1) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least CC 25% of its side group exposed to the surface, with the proviso that the comprisition is not fhr245Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln.

CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln (2) a nucleotide sequence (V) encoding CC (TV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) (2) an expression vector (VI) comprising (V); (4) a host cell (VII) (2) comprising (V) or (VI); (5) increasing (W) the functional in vivo half-cc (11fe or the serum half-life of a parent protein C polypeptide. The CC conjugates, variants and protein C proteins are useful as medicaments, CC and in the manufacture of medicaments for the treatment (and cdiagnosis/prevention) of stroke, myocardial infarction, after venous cc thromboeis, disseminated intravascular coagulation (DIC), sepsis, septic shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow crassplantation, burns, pregnancy, major surgery/trauma or adult
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   18-OCT-2000; 2000DK-00001560.

                                                                                                             respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 antitypsin. The conjugates have an increased in vivo half-life, increased serum half-life, increased resistant to inhibitors, reduced remai clearance, reduced immunogenicity and/or increased bloavailability. The conjugate offers a number of advantages over the currently available APC products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 9; Page; 92pp; English.

The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        intravascular coagulation, e.g. deep vein thrombosis and pulmonary embolism. They may also be used in the treatment of inherited protein C deficiency. The modified protein C has the advantage of increased stability in plasma and thus a greater half-life compared to prepns. of human protein C purified from plasma. (Updated on 25-MAR-2003 to correct
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAQ72994 encodes AAR62653 human protein C, from which the modified protein C molecule described in AAR62654 is derived. The modified molecule is useful in the treatment of a variety of conditions involving
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Modified human protein C molecules - esp. useful for treating coagulation -related disorders such as Protein C deficiency or thrombosis, or for promoting fibrinolysis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 461 AA;

                                          Freskgaard PO;
```

Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.

Claim 9; Page; 92pp; English.

The invention relates to a conjugate (I) comprising at least one nonCC polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to
CC a protein C polypeptide comprising an amino acid sequence which differs
CC from that of a parent protein C polypeptide (III) in at least one
CC introduced and/or at least one removed amino acid residue comprising an
CC stab. Also included are (I) a variant (IV) of (III) comprising a
CC substitution in a position (P) where (P) is an amino acid with at least
CC substitution is not Thr245Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln,
CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The conjugate offers a number of advantages over the currently available. APC products, including longer duration between injections, administration of less protein and fewer side effects. Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2013-014. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 antitrypsin. The conjugates have an increased in vivo half-life, increased serum half-life, increased resistant to inhibitors, reduced remaind clearance, reduced immunogenicity and/or increased bioavailability.

CC introduced and/or at least one removed amino acid residue comprising an CC attachment group for the non-polypeptide group (e.g. an W-glycosylation CC site). Also included are (1) a variant (IV) of (III) comprising a CC substitution in a position (P) where (P) is an amino acid with at least CC 25% of its side group exposed to the surface, with the proviso that the CC substitution is not Thr245Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln.

CC Ty302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CC His/Lys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a nucleotide sequence (V) encoding CC (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII)
CC comprising (V) or (VI); (5) increasing (M2) the functional in vivo half-
CC life or the serum half-life of a parent protein C polypeptide. The CC onjugates, variants and protein C proteins are useful as medicaments, CC and in the manufacture of medicaments for the treatment (and C diagnosis/prevention) of stroke, myocardial infarction, after venous CC thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic CC shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow CC transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ABDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 antitrypsin. The conjugates have an increased in vivo half-life, increased resistant to inhibitors, reduced renal clearance, reduced immunogenicity and/or increased bioavailability. The conjugate offers a number of advantages over the currently available of the conjugate offers a number of advantages over the currently available.
                  APC products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, a administration of less protein, and fewer side effects. Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a conjugate (I) comprising at least one non-
polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attache
a protein C polypeptide comprising an amino acid sequence which diffe
from that of a parent protein C polypeptide (III) in at least one
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 18-OCT-2000; 2000DK-00001560.

increased resistance to activation by e.g. human plasma and alpha-1 (C antirrypsin. The conjugates have an increased in vivo half-life, increased serum half-life, increased in vivo half-life, c increased serum half-life, increased in vivo half-life, c increased in vivo half-life, increased serum half-life, increased in vivo half-life, c increased serum half-life, increased in vivo half-life, increased serum half-life, increased in vivo half-life, c increased serum half-life, increased bioavailability. The conjugate offers a number of advantages over the currently available c APC products, including longer duration between injections, c administration of less protein, and fewer side effects. Moreover, a creduced anticoagulant activity is beneficial to reduce the risk of c leeding while maintaining the antiinflammatory activity of APC c activated protein C onjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is coated on chromosome 2q13-q14. The present sequence is not c located on chromosome 2q13-q14. The present sequence is not c shown in the specification but was created by the indexer using the c protein C sequence appearing as AAU99002 and the information in claim 9 to the conjugate appearing as AAU99002 and the information in claim 9 to the conjugate appearing as AAU99002 and the information in claim 9 to the conjugate appearing as AAU99002 and the information in claim 9 to the conjugate appearing as AAU99002 and the information in claim 9 to the conjugate appearing as AAU99002 and the information in claim 9 to the conjugate appearing as AAU99002 and the information in claim 9 to the conjugate appearing as AAU99002 and the information in claim 9 to the conjugate appearing as AAU99002 and the information in claim 9 to the conjugate appearing as AAU99002 and the information in claim 9 to the conjugate appearing as AAU99002 and the information in claim 9 to the conjugate protein conjugate and the conjugate protein conjugate appearing the conjugate 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             25% of its side group exposed to the surface, with the proviso that the substitution is not Thr245ser/Ala/His/Lys/Arg/Asm/Asp/Glu/Gly/Gln, Cryr302Ser/Ala/His/Lys/Arg/Asm/Asp/Glu/Gly/Gln, Cryr302Ser/Ala/His/Lys/Arg/Asm/Asp/Glu/Gly/Gln; Cryr302Ser/Ala/His/Lys/Arg/Asm/Asp/Glu/Gly/Gln; Cryr302Ser/Ala/His/Crys/Arg/Asm/Asp/Glu/Gly/Gln; Cryr302Ser/Ala/His/Crys/Arg/Asm/Asp/Glu/Gly/Gln; Cryr302Ser/Ala/His/Crys/Arg/Asm/Asp/Glu/Gly/Gln; Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/Cryr302Ser/Ala/His/C
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      attachment group for the non-polypeptide group (e.g. an N-glycosylation site). Also included are (1) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               18-OCT-2000; 2000DK-00001560.

Protein C Zymogen FLIN comprises a signal peptide and propeptide of a gamma-carboxylated secreted protein, the light chain of HPC, a basic dipeptide (i.e. Lys-Arg, but can also be Arg-Lys, Lys-Lys or Arg-Arg) and amino acid residues 200-461 of HPC but with Asp(209) replaced by Phe and Asp(214) replaced by Asn. The zymogen can be activated in vivo by thrombin alone (even in the presence of calcium) and is more susceptible to activation by thrombin, thrombomodulin than native HPC zymogen. Zymogen FLIN can be administered as a pro drug useful in prevention and treatment of diseases involving intravascular coagulation. It can also be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               HPC mutant; pro
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      09-JAN-2003

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              located on chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      APC products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, and interest administration of less protein, and fewer side effects. Moreover, and interest and include the risk of reduced anticoagulant activity is beneficial to reduce the risk of reduced anticoagulant activity is beneficial to reduce the risk of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       increased serum half-life, increased resistant to inhibitors, reduced renal clearance, reduced immunogenicity and/or increased bioavailability. The conjugate offers a number of advantages over the currently available
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 antitrypsin. The conjugates have an increased in vivo half-life, increased resistant to inhibitors, reduce increased serum half-life, increased resistant to inhibitors, reduce
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to a protein C polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one introduced and/or at least one removed amino acid residue comprising an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a conjugate (I) comprising at least one non-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Local

CC 25% of its side group exposed to the surface, with the proviso that the consistitution is not Thr245Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, (2) a nucleotide sequence (V) encoding (TV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) CC comprising (V) or (VI); (5) increasing (W2) the functional in vivo half-clife of a parent protein C polypeptide. The conjugates, variants and protein C proteins are useful as medicaments, and in the manufacture of medicaments for the treatment (and clasgosis/prevention) of stroke, myocardial infarction, after venous thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic shock, embodi e.g. pulmonary emboli, transplantation such as bone marrow transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alphalic antitrypsin. The conjugates have an increased in vivo half-life, cantitrypsin. The conjugates have an increased in vivo half-life. The conjugates have an increased in vivo half-life antitrypsin. The conjugates have an increased in vivo half-life. Cantitrypsin. The conjugates have an increased in conjugate offers a number of advantages over the currently available candinistration of less protein, and fewer side effects. Moreover, a conjugate protein C has an activity is beneficial to reduce the risk of the conjugate plasma life. The cense for wortein C is cativated protein C) conjugates. This must be especially important when conjugate has an attended national field in the conjugate servence and the conjugate offers and the conjugate offers and the conjugate offers and the conjugate offers and the conjugate offers and the conjugate offers and the conjugate offers and the conjugate offers and the conjugate of the conjugate of a parameter of the conjugate of the conjugate of the conjugate of the conjugate of the conjugate of the conjugate of the conjugat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ş

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    attachment group for the non-polypeptide group (e.g. an N-glycosylation site). Also included are (1) a variant (IV) of (III) comprising a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    substitution in

Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.

Claim 9; Page; 92pp; English.

substitution is not Thr245Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, Thr245Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, (2) a nucleotide sequence (V) encoding (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) comprising (V) or (VII); (5) increasing (M2) the functional in vivo half-life or the serum half-life of a parent protein C polypeptide. The conjugates, variants and protein C proteins are useful as medicaments, and in the manufacture of medicaments for the treatment (and diagnosis/prevention) of stroke myocardial infarction, after venous thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow attachment group for the non-polypeptide group (e.g. an N-glycosylation site). Also included are (1) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least polypeptide molety (II) (e.g. an N-glycosyl group) covalently attached to a protein C polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one introduced and/or at least one removed amino acid residue comprising an The invention relates to a conjugate (I) comprising at least one non-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     administration of less protein, and fewer side effects. Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on Chromosome 2913-914. The present sequence represents a zymogen protein C arriant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as ANU99002 and the information in claim 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-l antitrypsin. The conjugates have an increased in vivo half-life, increased serum half-life, increased resistant to inhibitors, reduced renal clearance, reduced immunogenicity and/or increased bioavailability. The conjugate offers a number of advantages over the currently available APC products, including longer duration between injections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 419 AA;

CC polypeptide moiety [II] (e.g. an N-glycosyl group) covalently attrached to polypeptide moiety [II] (e.g. an N-glycosyl group) covalently attrached to CC a protein C polypeptide comprising an amino acid sequence which differs C from that of a parent protein C polypeptide (III) in at least one controduced and/or at least one removed amino acid residue comprising an extrachment group for the non-polypeptide group (e.g. an N-glycosylation C site). Also included are (1) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least CC substitution is not Thr245Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, CC Tyr30ZSer/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/CC His/Lys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a nucleotide sequence (V) encoding CC (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) C comprising (V) or (VII); (5) increasing (M2) the functional in vivo half-CC conjugates, variants and protein C proteins are useful as medicaments, and in the manufacture of medicaments for the treatment (and control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of th
CC diagnosis/prevention) of stroke, myocardial infarction, after venous consists of the control of stroke, myocardial infarction (DIC), sepsis, septic shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow cransplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alphalic antirypsin. The conjugates have an increased in vivo half-life, increased serum half-life, increased resistant to inhibitors, reduced cransplantation offers a number of advantages over the currently available care products, including longer duration between injections, and creduced anticoagulant activity is beneficial to reduce the risk of the ding while maintaining the antiinflammatory activity of APC bleeding while maintaining the antiinflammatory activity important when conjugate has an extended plasma life. The gene for protein C is located on chromosome 2q13-q14. The present sequence represents a zymogen control of the invention. Note: The present sequence is not
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  18-OCT-2000;

WPI; 2002-489875/52

Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.

CC polypoptide molety (II) (e.g. an N-glycosyl group) covalently attached to CC a protein C polypoptide comprising an amino acid sequence which differs C from that of a parent protein C polypoptide (III) in at least one introduced and/or at least one removed amino acid residue comprising an CC attachment group for the non-polypoptide (III) comprising a N-glycosylation C site). Also included are (1) a variant (IV) of (III) comprising a least trution in a position (P) where (P) is an amino acid with at least CC substitution in a position (P) where (P) is an amino acid with at least CC substitution is not fhr24Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, (Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or PhealiSer/Ala/Thr/CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or PhealiSer/Ala/Thr/CC His/Lys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a nucleotide sequence (V) encoding C (IV); (3) an expression vector (VI) comprising (VI) (4) a host cell (VII) C comprising (VI) or (VI); (5) increasing (VI) the functional in vivo half-CC infe or the serum half-life of a parent protein C polypoptide. The conjugates, variants and protein C proteins are useful as medicaments, CC and in the manufacture of medicaments for the treatment (and choosis, disseminated intravascular conjugation (III), sepsis, septic chock of the comprise of the conformation of the parent protein c polypoptide as not constituted intravascular constitution such as bone marrow shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARUS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 antitrypsin. The conjugates have an increased in vivo half-life, increased serum half-life, increased resistant to inhibitors, reduced renal clearance, reduced immunogenicity and/or increased bioavailability. The conjugate offers a number of advantages over the currently available APC products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, a administration of less protein, and fewer side effects the risk of the currently available anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9 The invention relates to a conjugate (I) comprising at least one non-Sequence 419 AA;

The invention relates to a conjugate (I) comprising at least one non-polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to a protein C polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one introduced and/or at least one removed amino acid residue comprising an attachment group for the non-polypeptide group (e.g. an N-glycosylation site). Also included are (1) a variant (IV) of (III) comprising a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Peptide

CC His/Lys/Arg/Asn/Asp/Giu/Giy/Gin; [2] a nucleotide sequence (V) encoding (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) CC comprising (V) or (VI); (5) increasing (W2) the functional in vivo half-cC life or the serum half-life of a parent protein c polypeptide. The conjugates, variants and protein C proteins are useful as medicaments, CC and in the manufacture of medicaments for the treatment (and coding of stroke, myocardial infarction, after venous thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increased serum half-life, increased in increased in vivo half-life, increased trainsplantation for surgery/trauma or adult conjugate offers a number of advantages over the currently available conjugate offers a number of advantages over the currently available capt products, including longer duration between injections.

CC administration of less protein, and fewer side effects. Moreover, a dedication while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is not the conjugate has an extended plasma life. The gene for protein C sequence appearing as ANU99002 and the information in claim 9 cc constant of the invention. Note: The present sequence is not conjugate of a protein c sequence appearing as ANU99002 and the information in claim 9 cc conjugates of the conjugates in the specification but was created by the indexer using the conjugates of the conjugates and the information in claim 9 cc constant of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     8888888888888888888888888888888888888

                                      Query Match
                                                                                                                                                                                                                                                                                                                                           The present sequence is that of a claimed human protein C derivative in which Ser at amino acid position 11 of the mature wild-type protein C sequence (see AAB2673) is substituted with Gly, Gln at position 32 with Glu, Asn at position 33 with Asp, and Leu at position 194 with Ser. The protein is an example of protein C derivatives of the invention that have at least 2 amino acid substitutions, but which have increased anticoagulant activity and resistance to inactivation by serpins compared with the wild-type protein, while retaining the biological activity of the wild-type protein. A method of producing the derivatives using recombinant DNA methods is claimed. The protein C derivatives are useful
                                                                                                                           protein C deficiency, acute arterial thrombotic occlusion, thromboembolism, or stemosis in coronary, cerebral or peripheral arteries or in vascular grafts. Human patients with genetically predisposed prothrombotic disorders may be treated by gene therapy (all claimed)
                                                                                                                                                                                                             for treating coronary syndromes and disease states predisposing to thrombosis (e.g. myocardial infarction and unstable angina), vascular occlusive disorders and hypercoagulable states, sepsis (in combination with bactericidal permeability increasing protein or with tissue factor pathway inhibitor), thrombotic disorders (in combination with an antiplatelet agent or by local delivery through an intracoronary catheter),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel human protein C derivative for treating, e.g., myocardial infarction, unstable angina, sepsis, thrombotic disorders, acute arterial thrombotic occlusion, and thromboembolism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI; 2001-496919/54.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Modified-site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is that of a claimed human protein C derivative in which Ser at position 11 of the mature wild-type protein C sequence (see AAB82673) is substituted with Gly, Gln at position 32 with Glu, Asn at position 33 with Asp, Leu at position 194 with Ser, and Thrat position 254 with Ser. It is an example of protein C derivatives of the invention that have at least 2 amino acid substitutions, but which have increased anticogulant activity and resistance to inactivation by serpins compared anticogulant activity and resistance to inactivation by serpins compared
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        19-JAN-2001;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WO200157193-A2
                                                                                                                                                                                                                                                     for treating coronary syndromes and disease states predisposing to thrombosis (e.g. myocardial infarction and unstable angina), vascular occlusive disorders and hypercoagulable states, sepsis (in combination with bactericidal permeability increasing protein or with tissue factor pathway inhibitor), thrombotic disorders (in combination with an antiplatelet agent or by local delivery through an intracoronary catheter), protein C deficiency, acute arterial thrombotic occlusion, thromboembolism, or stenosis in coronary, cerebral or peripheral arteries or in vascular grafts. Human patients with genetically predisposed prothrombotic disorders may be treated by gene therapy (all claimed)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 4; Page 53-54; 63pp; English

```

The present sequence is that of a claimed human protein C derivative in C which His at position 10 of the mature wild-type protein C sequence (see C ABB2673) is substituted with Gln, Ser at position 11 with Gly, Gln at C position 32 with Glu, Asn at position 33 with Asp, and Leu at position CC lay with Ser. It is an example of protein C derivatives of the invention CC that have at least 2 amino acid substitutions, but which have increased CC with the wild-type protein, while retaining the biological activity of CC the wild-type protein. A method of producing the biological activity of CC the wild-type protein. A method of producing the biological activity of CC trombosis (e.g. myocardial infarction and unstable angina), vascular CC coclusive disorders and hypercoagulable states, sepsis (in combination CC with bactericidal permeability increasing protein or with tissue factor CC with bactericidal permeability increasing protein or with tissue factor CC pathway inhibitor), thrombotic disorders (in combination with an antiplatelet agent or by local delivery through an intracoronary catheter), protein C deficiency, acute arterial thrombotic occlusion, thromboembolism, or stenosis in coronary, cerebral or peripheral arteries or in vascular grafts. Human patients with genetically predisposed prothrombotic disorders may be treated by gene therapy (all claimed)

                                                                                                                                                                                           The invention relates to human protein C derivatives and nucleic acid molecules encoding such derivatives. These derivatives have increased anticoagulation activity, resistance to serpin inactivation and increased sensitivity to thrombin activation compared to wild type protein C, and retains the biological activity of the wild type human protein C. Protein C derivatives are useful in the manufacture of a medicament for the treatment of acute coronary syndromes e.g. myocardial infarction and unstable angina; and disease states predisposing to thrombosis; vascular occlusive disorders and hypercoagulable states e.g. disseminated intravascular coagulation (DiC), burns, transplantations, thalassaemia, sickle cell disease, viral haemorrhagic fever and haemodytic uremic syndrome; sepsis in combination with bacterial permeability increasing protein; thrombotic disorders in combination with an anti-platelet agent;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Protein C derivative for treating acute coronary syndromes, vascular occlusive disorders, thrombotic disorders and sepsis, comprises substitutions at specified amino acid positions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     N-PSDB; AAD15227.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 5; Page 48-49; 59pp; English
```

Query Match Best Local : protein C deficiency; acute arterial thrombotic occlusion, thromboembolism or stenosis in coronary, cerebral or peripheral arteries or in vascular grafts in combination with a thrombolytic agent. Nucleic acid molecules of the invention are useful for treating humans with genetically predisposed prothrombotic disorders by gene therapy. The present sequence is human protein C derivative Sequence 419 AA; 98.8%; Score 2296; DB 4; Length 419; Pred. No. 2e-141;

The zymogen can be activated in vivo by thrombin alone (even in the presence of calcium) and is more susceptible to activation by thrombin/thrombomodulin than native HPC zymogen. Zymogen FN can be administered as a pro drug useful in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         EP443875-A.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is that of a claimed human protein C derivative in CC which His at position 10 of the wild-type protein C sequence (see ALBB2673) is substituted with Gln. Ser at position 11 with Gly Gln at CC which Ser, and Thr at position 24 with Asp, Leu at position 194 CC with Ser, and Thr at position 254 with Ser. It is an example of protein CC derivatives of the invention that have at least 2 amino acid CC substitutions, but which have increased anticoagulant activity and CC resistance to inactivation by serpins compared with the wild-type CC protein, while retaining the biological activity of the wild-type CC protein. A method of producing the derivatives using recombinant DNA CC methods is claimed. The protein C derivatives are useful for treating CC coronary syndromes and disease states predisposing to thrombosis (e.g. CC myocardial infarction and unstable angina), vascular occlusive disorders CC and hypercoagulable states, sepsis (in combination with bactericidal permeability increasing protein or with tissue factor pathway inhibitor), thrombotic disorders in combination with an anti-plate accent or by

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                        cc molecules encoding such derivatives. These derivatives have increased canticoagulation activity, resistance to serpin inactivation and increased cesnsitivity to thrombin activation compared to wild type protein C. and control of the biological activity of the wild type human protein C. Protein C. derivatives are useful in the manufacture of a medicament for the current of acute coronary syndromes e.g. myocardial infarction and cunstable angina; and disease states predisposing to thrombosis; vascular coclusive disorders and hypercoagulable states e.g. disseminated contusive disorders and hypercoagulable states e.g. disseminated contusive cell disease, viral haemorrhagic fever and haemolytic uremic syndrome; sepsis in combination with bacterial permeability increasing corotein; thrombotic disorders in combination with an anti-platelet agent; protein C deficiency; acute arterial thrombotic occlusion, thrombosism or stenosis in coronary, cerebral or peripheral arteries continued to the combineral arteries are the combineral arteries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; protein C derivative; anticoagulation activity; thrombosis; serpin inactivation; acute coronary syndrome; myccardial infarction; vascular occlusive disorder; hypercoagulable state; angina; sepsis; disseminated intravascular coagulation; DIC; burn; transplantation; sickle cell disease; viral haemorrhagic fever; protein C deficiency; haemolytic uremic syndrome; acute arterial thrombotic occlusion;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAE08627 standard; protein; 419 AA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Protein C derivative for treating acute coronary syndromes, vascular occlusive disorders, thrombotic disorders and sepsis, comprises substitutions at specified amino acid positions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human protein C derivative #1.

anticoacy control activity, resistance to serpin inactivation and increased constitutive to thrombin activation compared to wild type protein C. and CC retains the biological activity of the wild type human protein C. Protein CC derivatives are useful in the manufacture of a medicament for the constable angina; and disease states predisposing to thrombosis; vascular cocclusive disorders and hypercoagulable states e.g. disseminated cocclusive disorders and hypercoagulable states e.g. disseminated cocclusive disorders and hypercoagulable states e.g. disseminated contravascular coagulation (DIC), burns, transplantations, thalassaemia, combinated and transplantations, thalassaemia, computed the compared protein, thrombotic disorders in combination with an anti-platelet agent; corin combolism or stenosis in coronary, cerebral or peripheral arteries corin collecules of the invention are useful for treating humans with entering humans with predisposed prothin characterian derivative.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Protein C derivative for treating acute coronary syndromes, vascular occlusive disorders, thrombotic disorders and sepsis, comprises substitutions at specified amino acid positions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           N-PSDB; AAD15228.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to human protein C derivatives and nucleic acid molecules encoding such derivatives.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; protein C derivative; anticoagulation activity; thrombosis; serpin inactivation; acute coronary syndrome; myocardial infarction; vascular occlusive disorder; hypercoagulable state, angina, sepsis; disseminated intravascular coagulation; DIC; burn; transplantation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             anticoagulation activity, resistance to serpin inactivation and increased sensitivity to thrombin activation compared to wild type protein C, and retains the biological activity of the wild type human protein C. C derivatives are useful in the manufacture of a medicament for the treatment of acute coronary syndromes e.g. myocardial infarction and unstable angina, and disease states predisposing to thrombosis; vascular occlusive disorders and hypercoagulable states e.g. disseminated intravascular coagulation (DIC), burns, transplantations, thalassaemia, sickle cell disease, viral haemornhogic fever and haemorhic uremic syndrome; sepsis in combination with bacterial permeability increasing protein; thrombotic disorders in combination with an anti-platelet agent;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   sickle cell disease; viral haemorrhagic fever; protein C deficiency; haemolytic uremic syndrome; acute arterial thrombotic occlusion; thromboembolism; prothrombotic disorder; gene therapy; thalassaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gerlitz BE,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Homo sapiens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      protein C deficiency; acute arrerial thrombotic occlusion, thromboembolism or stemosis in coronary, cerebral or peripheral arteries or in vascular grafts in combination with a thrombolytic agent. Nucleic acid molecules of the invention are useful for treating humans with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              14-MAR-2000;

                                                          protein C (aPC), a chelating agent and optionally a diluent. The composition of the invention is useful for treating thrombotic disorde such as: intravascular coagulation, thrombotic stroke, deep vein thrombosis, pulmonary embolism, peripheral arterial thrombosis, acute myocardial infarction and retina thrombosis. The present amino acid
                                                                                                                                                                                                                                                                                                                                                                      08-MAR-2002; 2002US-0363364P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 intravascular coagulation; thrombotic stroke; deep
pulmonary embolism; peripheral arterial thrombosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human activated protein C-related protein #1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              18-DEC-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ADC40012 standard;
Sequence 410 AA;
                                                                                                                                       The invention comprises a pharmaceutical composition containing activated
                                                                                                                                                                            Disclosure; SEQ ID NO 1; 29pp; English

Tyr. Thr and Asn, respectively. The zymogen can be activated in vivo by thrombin alone (even in the presence of calcium) and is more susceptible to activation by thrombin/thrombomodulin than native HPC zymogen. Zymogen SC can be administered as a pro drug useful in prevention and treatment of diseases involving intravascular coagulation. It can also be given to thrombocytopenic patients with invasive cancers with effective and intensive chemotherapy. See also AAR13537-40. (Updated on 09-JAN-2003 to add missing OS field.)
